

WELCOME TO OUR PRESENTATION

Environmental Impact Assessment (EIA)

Teknaf-Tetulia Integrated Economic Corridor

Mitigation Measures & Monitoring Workflow(Part)

Md. Abu Hanif
Roll :2110856159
MS- 1st semester

Department of Geography and Environmental Studies

Part I: Mitigation & Monitoring Plan

Strategic framework for environmental preservation and compliance.

Core Mitigation Objectives

The primary goal of the mitigation plan is to minimize the ecological and social impact of the \$79 billion economic corridor project.

- 🌿 **Ecological Integrity:** Protecting sensitive habitats like mangroves and the Halda River.
- 🌊 **Resource Quality:** Ensuring water and air quality meet national DoE standards.
- 👤 **Social Safeguards:** Prioritizing resettlement and livelihood restoration for affected people.

Environmental Mitigation

Impact Aspect	Mitigation Measure	Monitoring Indicator	Responsible Agency	Frequency
Habitat Loss	Route avoidance, mangrove replanting, wildlife underpasses	Mangrove cover; sanctuary encroachment	Forest Dept. / DOE	Quarterly
River Water Quality	Silt curtains at crossings; treated construction effluent disposal	Turbidity, DO, BOD at crossing points	BOT / WARPO	Monthly
Halda Fish Spawning	Conservation free-buffer; seasonal work restriction during spawning	Spawning incidence; fish larvae counts	Dept. of Fisheries	Seasonal

Social & Physical Mitigation

Impact Aspect	Mitigation Measure	Monitoring Indicator	Responsible Agency	Frequency
Air Quality	Dust suppression, covered haulage, low-emission plant	PM2.5 / PM10 at sensitive receptors	BOT	Continuous
Resettlement	Resettlement Action Plan; grievance redress mechanism	Households compensated; grievances resolved	BRM / PIU Safeguards	Monthly
Noise Levels	Time-restricted works, noise barriers near schools	Ambient noise level [dB]	BOT / Contractor	Quarterly
Spoil/Waste	Designated disposal sites; borrow pit rehabilitation	Volume disposed vs. plan; site status	Contractor / PIU	Monthly

Part II: EIA Process Workflow

The 10-step systematic path to environmental compliance.

Workflow Phase 1: Planning

Screening

Determine EIA category and level of assessment required.

Scoping

Define study boundary, key issues, and Terms of Reference (ToR).

Baseline Data

Field surveys of air, water, land, and biodiversity status.

Impact Assessment

Predict the significance of combined constructional impact.

Workflow Phase 2: Design & Review

Consultation

Public disclosure and engagement with affected communities.

EMP Design

Develop mitigation measures and a monitoring framework.

Regulatory Review

Submission to Department of Environment (DoE) for ECC clearance.

Workflow Phase 3: Monitoring

Construction Phase

- ✓ Compliance inspections and incident reporting during build.

Operational Audit

- ✓ Post-commissioning surveillance against predicted values.

Reporting

- ✓ Periodic reporting and adjustment of measures as needed.

Institutional Roles

Dept. of Environment

- ✓ Responsible for final ECC clearance
- ✓ Enforcing conservation rules.

PIU / BRM

- ✓ Project Implementation Unit handles social safeguards and compensation.

Contractors

- ✓ Implementation of on-site mitigation
- ✓ Monthly data reporting.
